GENERAL

INTRODUCTION SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of this publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions, which are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts: components, kits, and chassis. If the part number is not known, include the chassis or kit number of which it is a part and a sufficient description of the required component for proper identification.

PERSONAL SAFETY

The following precautions are recommended for personal safety:

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are secure and any open connectors are properly terminated.
- SHUT OFF this equipment when near electrical blasting caps or while in an explosive atmosphere.
- All equipment should be properly grounded before powerup for safe operation.
- This equipment should be serviced by only qualified technicians.

PRE-INSTALLATION CONSIDERATIONS

1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

2. LICENSING REQUIREMENTS

Federal regulations require a station license for each radio installation (mobile or base) be obtained by the equipment owner. The licensee is responsible for ensuring transmitter power, frequency, and deviation are within the limits permitted by the station license.

Transmitter adjustments may be performed only by a licensed technician holding an FCC first, second or general class commercial radiotelephone operator's license. There is no license required to install or operate the radio.

3. PRE-INSTALLATION CHECKOUT

3-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

3-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. Signalling equipment operation should be verified.

4. PLANNING THE INSTALLATION

4-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

4-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

4-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

4-4. DC Power and wiring

- This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
- Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
- Connect the ground lead directly to the battery negative terminal.
- 4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

5. INSTALLATION PLANNING – CONTROL STATIONS5-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

5-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

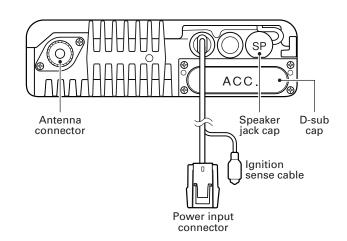

GENERAL / SYSTEM SET-UP

SERVICE

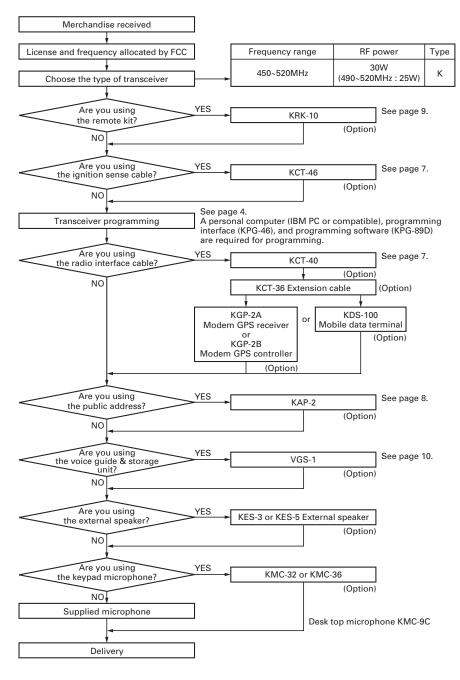

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

NOTE

- If you do not intend to use the speaker 3.5-mm jack and the D-sub 25-pin connector, fit the supplied speaker-jack cap and D-sub cap to stop dust and sand from getting in.
- If the transceiver is turned ON or OFF when the power-on/ off status message is enabled, the transceiver sends the status

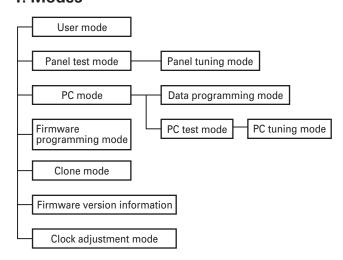

SYSTEM SET-UP

REALIGNMENT

1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the funda-
	mental characteristics.
Panel tuning mode	Used by the dealer to tune the radio.
PC mode	Used for communication between the
	radio and PC (IBM compatible).
Data programming	Used to read and write frequency data
mode	and other features to and from the radio.
PC test mode	Used to check the radio using the PC.
	This feature is included in the FPU.
	See panel test.
PC tuning mode	Used to tune the radio using the PC.
	This feature is included in the FPU.
	See panel tuning.
Firmware	Used when changing the main program
programming mode	of the flash memory.
Clone mode	Used to transfer programming data from
	one radio to another.
Firmware version	Used to confirm the internal firmware
information	version.
Clock adjustment mode	Used to adjust date and time.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[A] + Power ON
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode] + [S]
Firmware programming mode	[S] + Power ON
Clone mode	[B] + Power ON
Firmware version information	[△] + Power ON
Clock adjustment mode	[C] + Power ON

3. Panel Test Mode

Setting method refer to ADJUSTMENT.

4. Panel Tuning Mode

Setting method refer to ADJUSTMENT.

5. PC Mode

5-1. Preface

The transceiver is programmed by using a personal computer, programming interface (KPG-46) and programming software (KPG-89D).

The programming software can be used with an IBM PC or compatible. Figure 1 shows the setup of an IBM PC for programming.

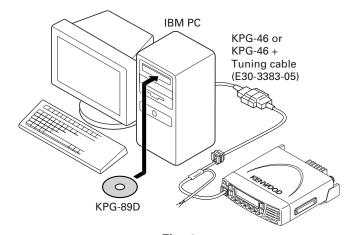

Fig. 1

REALIGNMENT

5-2. Connection procedure

- 1. Connect the transceiver to the personal computer with the interface cable.
- When the POWER switch on, user mode can be entered immediately. When PC sends command the radio enter PC mode, and "PROGRAM" is displayed on the LCD. When data transmitting from transceiver, the red LED is lights.

When data receiving to transceiver, the green LED is lights.

Note:

 The data stored in the personal computer must match model type, when it is written into the flash memory.

5-3. KPG-46 description (PC programming interface cable: Option)

The KPG-46 is required to interface the transceiver to the computer. It has a circuit in its D-subconnector (25-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-46 connects the modular microphone jack of the transceiver to the computers RS-232C serial port.

5-4. Programming software KPG-89D description

The KPG-89D is the programming software for the transceiver supplied on a CD-ROM. This software runs under MS-Windows 98, ME, Windows 2000 or XP on an IBM-PC or compatible machine.

The data can be input to or read from the transceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

6. Firmware Programming Mode

6-1. Preface

Flash memory is mounted on the transceiver. This allows the transceiver to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

6-2. Connection procedure

Connect the transceiver to the personal computer (IBM PC or compatible) with the interface cable (KPG-46). (Connection is the same as in the PC Mode.)

Note:

You can only program firmware from the 8-pin microphone connector on the front panel. Using the 25-pin logic interface on the rear panel will not work.

6-3. Programming

- 1. Start up the firmware programming software (Fpro.exe).
- 2. Set the communications speed (normally, 115200 bps) and communications port in the configuration item.
- 3. Set the firmware to be updated by File name item.
- 4. Turn the transceiver power ON with the [S] key held down. Then, the orange LED on the transceiver lights and "PROG 115200" is displayed.

- 5. Check the connection between the transceiver and the personal computer, and make sure that the transceiver is in the Program mode.
- 6. Press write button in the window. When the transceiver starts to receive data, the [PG] display is blinking.
- 7. If writing ends successfully, the checksum is calculated and a result is displayed.
- 8. If you want to continue programming other transceivers, repeat steps 4 to 7.

Notes:

- This mode cannot be entered if the Firmware Programming mode is set to Disable in the Programming software.
- When programming the firmware, it is recommend to copy the data from the floppy disk to your hard disk before update the radio firmware.
 - Directly copying from the floppy disk to the radio may not work because the access speed is too slow.

6-4. Function

- 1. If you press the [■] key while "PROG 115200" is displayed, the display changes to "PROG 19200" (The LED blinks green) to indicate that the write speed is low speed (19200 bps). If you press the [■] key again while "PROG 19200" is displayed, the display changes to "PROG 38400" (The LED lights red and orange alternatively). If you press the [■] key again while "PROG 38400" is displayed, the display changes to "PROG 57600" (The LED blinks orange). If you press the [■] key again while "PROG 57600" is displayed, the display returns to "PROG 115200" (The LED lights orange).
- 2. If you press the [\(\tilde{\lambda} \)] key while "PROG 115200" is displayed, the checksum is calculated, and a result is displayed. If you press the [\(\tilde{\lambda} \)] key again while the checksum is displayed, "PROG 115200" is redisplayed.

Note:

Normally, write in the high-speed mode.

7. Clone Mode

Programming data can be transferred from one radio to another by connecting them via their 8-pin microphone connectors. The operation is as follows (the transmit radio is the master and the receive radio is a slave).

- Turn the master transceiver power ON with the [B] key held down. If the read authorization password is set to the transceiver, the transceiver displays "CLONE LOCK". If the password is not set, the transceiver displays "CLONE MODE".
- When you enter the correct password, and "CLONE MODE" is displayed, the transceiver can be used as the cloning master. The following describes how to enter the password.

REALIGNMENT

3. How to enter the password with the microphone keypad; If you press a key while "CLONE LOCK" is displayed, the number that was pressed is displayed on the transceiver. Each press of the key shifts the display in order to the left. When you enter the password and press the [*] key, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.

How to enter the password with the [\$] and [\$] keys; If the [\$] and [\$] keys is pressed while "CLONE LOCK" is displayed, numbers (0 to 9) are displayed flashing. When you press the [C] key, the currently selected number is determined. If you press the [S] key after entering the password in this procedure, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.

- 4. Power on the slave transceiver.
- 5. Connect the cloning cable (Part No. E30-3382-05) to the modular microphone jacks on the master and slave.
- 6. Press the [S] key on the master while the master displays "CLONE MODE". The data of the master is sent to the slave. While the slave is receiving the data, "PROGRAM" is displayed. When cloning of data is completed, the master displays "END", and the slave automatically operates in the User mode. The slave can then be operated by the same program as the master.
- 7. The other slave can be continuously cloned. When the [S] key on the master is pressed while the master displays "END", the master displays "CLONE MODE". Carry out the operation in step 4 to 6. Can not be cloned if the overwrite password is programmed to the slave.

Note:

Only the same models can be cloned together.

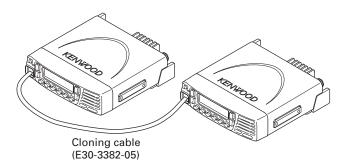

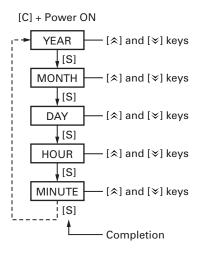

Fig. 2

8. Firmware Version Information

Turn the transceiver ON with the [\triangle] key held down. Then, the version is displayed during holding the [\triangle] key.

9. Clock Adjustment Mode

9-1. Flow chart of operation

1. Ignition Sense Cable (KCT-46 : Option)

The KCT-46 is an optional cable for enabling the ignition function. The ignition function lets you turn the power to the transceiver on and off with the car ignition key.

1-1. Connecting the KCT-46 cable to the transceiver

- 1. Open the KCT-46 fuse holder and insert a mini blade fuse (3A). (1)
- 2. While holding a clear protective cover, remove the black cap at the end of the yellow cable (ignition sense cable) of the transceiver. (②)
- 3. Connect the plug of the KCT-46 to the yellow cable terminal of the transceiver. (③)
- 4. Connect the other end of the KCT-46 to the ignition line of the car. (4)

Note: You must setup using the KPG-89D.

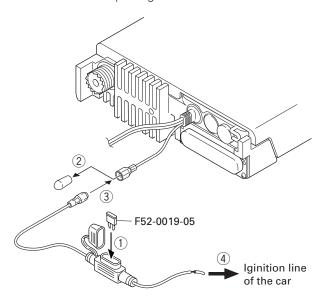

Fig. 1

2. Radio Interface Cable (KCT-40 : Option)

The KCT-40 connection cable kit is used to connect the TK-8180 transceiver to the KDS-100 (Mobile data terminal), KGP-2A (Modem GPS receiver), KGP-2B (Modem GPS controller) or through the KCT-36 extension cable.

2-1. Connecting the KCT-40 cable to the transceiver

- 1. Remove the D-sub cap on the rear of the transceiver. (1)
- 2. Connect the D-sub connector of the KCT-40 to the D-sub 25-pin terminal of the transceiver. (2)
- 3. Connect the 15-pin connector of the KCT-40 to a KDS-100, KGP-2A, KGP-2B or through a KCT-36 extension cable.

Note: You must setup using the KPG-89D.

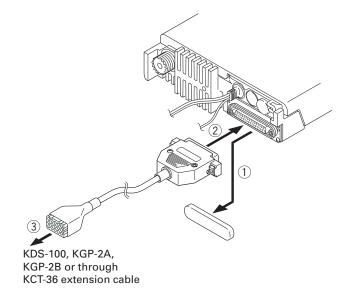

Fig. 2

3. Horn Alert/P.A. Relay Unit (KAP-2: Option)

The Horn alert (max. 2A drive), Public address and External speaker function are enabled by installing the KAP-2 in the TK-8180 transceiver.

3-1. Installing the KAP-2 unit in the transceiver

- Remove the cabinet, top packing and shielding plate of the transceiver.
- 2. Set the KAP-2 relay unit jumper pins according to the purpose of use.
- 3. Remove the 6-pin jumper connector inserted in the TX-RX unit (B/3) connector (CN428). (①)
- 4. Insert one side of the lead wire with connector (E37-1114-05) into the relay unit connector (CN3) (②) and the other side into the TX-RX unit (B/3) connector (CN428) (③).

- 5. Place the relay unit at the position shown in Figure 3-2 and secure it to the chassis with a screw.
- 6. Remove the cap on the rear of the chassis by pushing it from the inside with your finger. (④)
- 7. Pass the 6-pin connector of the cable (E37-1113-05) through the chassis hole (⑤) and insert the bush into the chassis hole.
- 8. Rotate the bush of the cable 90 degrees counterclockwise as viewed from the rear of the chassis. ((6))
- 9. Insert the 6-pin connector of the cable into the connector (CN2) of the KAP-2 relay unit. (⑦)

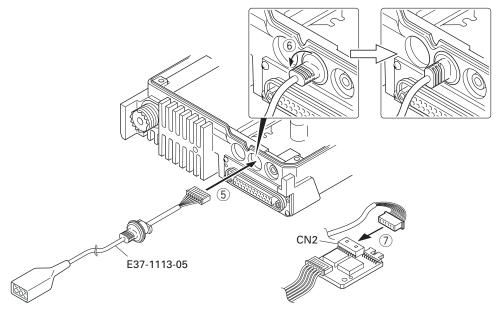

Fig. 3-4

4. Control Head Remote Kit (KRK-10: Option)

The KRK-10 remote kit is used to remotely operate a TK-8180 transceiver.

4-1. Installing the KRK-10 kit to the transceiver

- 1. Remove the front panel from the transceiver.
- 2. Install the KRK-10 main panel onto the transceiver.
- 3. Install the KRK-10 rear panel onto the front panel.
- 4. Connect the KRK-10 main panel to the rear panel with the cable.

■ Remove the front panel from the transceiver

1. Lift the two tabs of the panel on the bottom of the transceiver with a flat-head screwdriver (1) and remove the panel from the chassis (2).

Note: Confirm that the tabs of the speaker hardware fixture and holder is securely fitted in the front panel.

- 2. Remove the flat cable from the connector (CN902) of the display unit of the panel. (3)
- 3. Fold the black line of the flat cable (in three parts) as shown in Figure 4-2. (4, 5, 6)

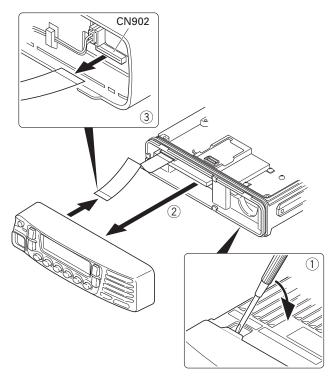

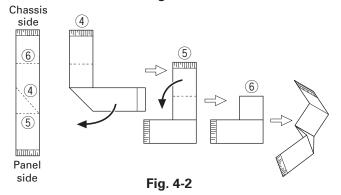

Fig. 4-1

■ Install the KRK-10 main panel onto the transceiver

4. Insert the flat cable that was removed in step 2 above into the connector (CN1) of the interface unit (A/2) of the KRK-10 main panel (A62-1101-01). (7)

Note: The terminal side of the flat cable must face down when inserting the flat cable into the connector.

5. Fit the main panel with four tabs onto the front of the chassis. (8)

Note: When installing the main panel onto the front of the chassis, hold down the flat cable with your fingers to prevent it from being caught.

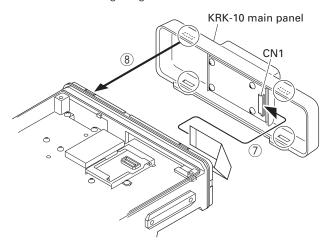

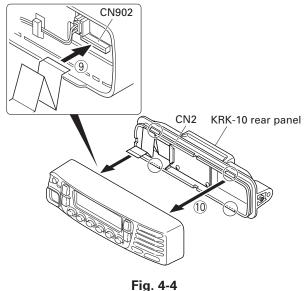

Fig. 4-3

■ Install the KRK-10 rear panel onto the front panel

6. Insert the flat cable attached to the interface unit (B/2) of the KRK-10 rear panel (A82-0056-01) into the connector (CN902) of the display unit of the panel (9). (The flat cable has been pre-inserted in the connector (CN2) of the rear panel at the time of shipping.)

Note: The terminal side of the flat cable must face down when inserting the flat cable into the connector.

7. Fit the four tabs of the rear panel into the front panel. (10)

INSTALLATION

■ Connect the KRK-10 main panel to the rear panel with the cable

- 8. Insert one 14-pin connector of the cable (E30-7514-05) into the connector (CN3) of the interface unit (A/2) of the main panel. (11)
- 9. Secure the cable bush on the main panel and fit the waterproof packing (orange) (12) securely over top.
- 10. Install the molded cover (13) over the connector on the main panel and secure it with two screws (14).
- 11. Insert the other 14-pin connector of the cable into the connector (CN4) of the interface unit (B/2) of the rear panel. (15)
- 12. Secure the cable bush on the rear panel and fit the waterproof packing (orange) (16) securely over top.
- 13. Install the molded cover (17) over the connector on the rear panel and secure it with two screws (18).

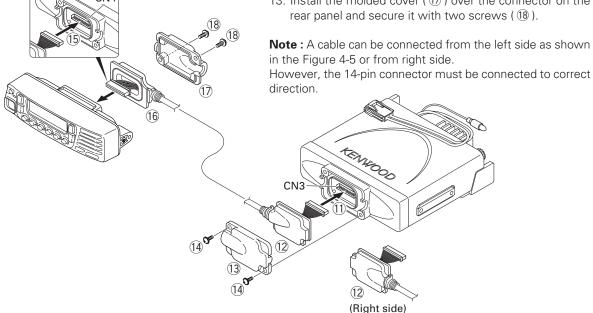

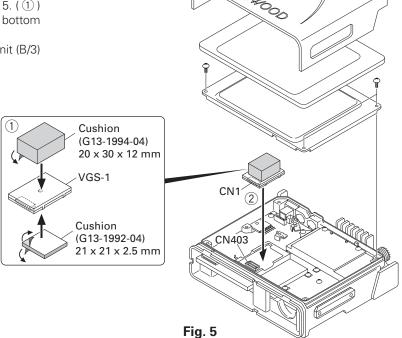

Fig. 4-5

5. Voice Guide & Storage Unit (VGS-1: Option)

5-1. Installing the VGS-1 unit in the transceiver

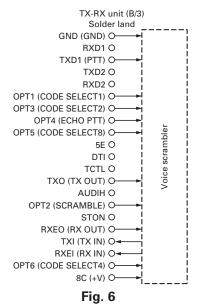

- 1. Remove the cabinet, top packing and shielding plate of the
- 2. Attach two cushions to VGS-1 as shown in Figure 5. (1) Note: Be sure not to cover the connector with the bottom cushion.
- 3. Insert the VGS-1 connector (CN1) into the TX-RX unit (B/3) connector (CN403). (2)

6. Voice Scrambler Board Connection

- 1. Remove the front panel from the transceiver.
- Solder each lead of the scrambler board to a necessary location of each landing on the component side of the TX-RX unit (B/3).
- 3. Wrap the scrambler board in a cushion and install it on the front of the chassis as shown in Figure 7-2.

Note: You must setup using the KPG-89D.

7. ANI Board Connection

- 1. Remove the front panel from the transceiver.
- Solder each lead of the scrambler board to a necessary location of each landing on the component side of the TX-RX unit (B/3).
- 3. Wrap the scrambler board in a cushion and install it on the front of the chassis as shown in Figure 7-2.

Note: You must setup using the KPG-89D.

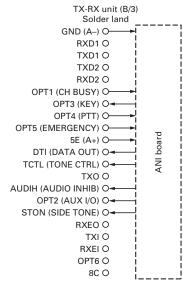

Fig. 7-1

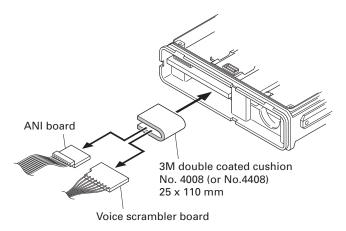

Fig. 7-2

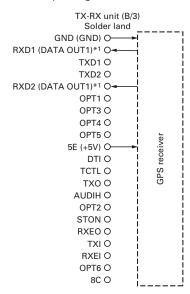

8. GPS Receiver Connection

8-1. Installing the GPS receiver

- Remove the cabinet, top packing and shielding plate of the transceiver.
- 2. Remove the front panel from the transceiver.
- 3. Attach two cushions to the top of the GPS receiver.
- 4. Attach the GPS receiver to the shield case with two cushions as shown in Figure 8-2.
- 5. Solder each lead of the GPS receiver to a necessary location of each landing on the component side of the TX-RX unit (B/3).
- 6. Place the GPS antenna cable in the hollow at the rear of the chassis. (Fig. 8-2 1)

Note: If the GPS receiver is installed, cut the base of the convex tab of the top packing with a pair of nippers, or similar tool. (Fig. 8-3 ②)

If the convex tab of the top packing is cut off, the water proofing property is no longer guaranteed.

*1 : Depending on the connected optional accessory, the DATA OUT1 may connect to either RXD1 or RXD2.

INSTALLATION

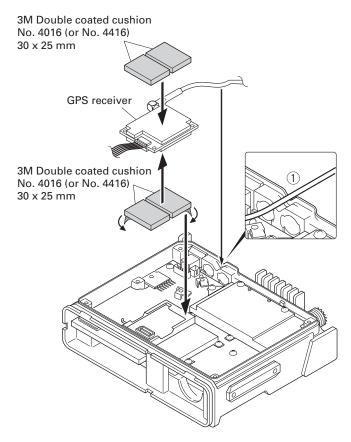

Fig. 8-2

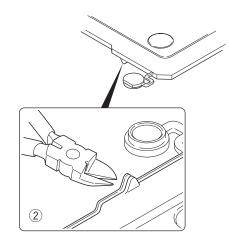

Fig. 8-3

8-2. Installing the GPS receiver together with the VGS-1

- 1. Remove the cabinet, top packing and shielding plate of the transceiver.
- 2. Remove the front panel from the transceiver.
- 3. Attach a cushion to the bottom of the VGS-1 as shown in Figure 8-5.

Note: Be sure not to cover the connector with the cushion.

- 4. Insert the VGS-1 connector (CN1) into the TX-RX unit (B/3) connector (CN403).
- 5. Perform step 3 to 6 of "8-1. Installing the GPS receiver" described on page 11.

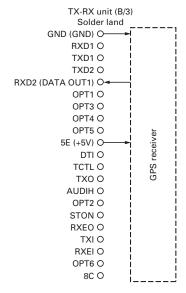

Fig. 8-4

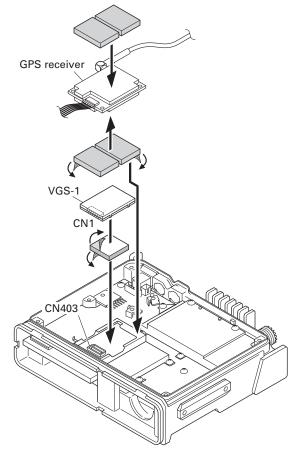

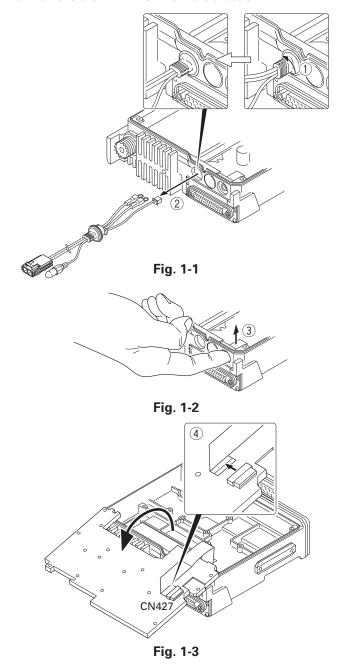

Fig. 8-5

DISASSEMBLY FOR REPAIR

1. Precautions on Disassembly

■ TX-RX PCB (TX-RX unit B/3) Disassembly

- Remove all screws and antenna terminals on the TX-RX PCB.
- 2. Rotate the bush of the power supply cable 90 degrees counterclockwise as viewed from the rear of the chassis (1) and remove the power supply cable from the chassis (2).
- 3. When the speaker phone jack is pushed up, using your finger, from the rear of the chassis (③), the TX-RX PCB is removed from the chassis.
 - **Note:** The TX-RX PCB and D-sub PCB (TX-RX unit A/3) are connected with a flat cable. Remove them carefully.
- 4. Turn the TX-RX PCB over and remove the flat cable from the connector (CN427). (4)
- 5. Remove the TX-RX PCB from the chassis.

■ Removing the speaker hardware fixture (J21-8481-03) and holder (J19-5468-03)

- 1. Remove the speaker lead from the holder hook. (1)
- 2. Remove the speaker connector from the display unit connector (CN901). (②)
- 3. When removing the speaker hardware fixture, insert a flathead screwdriver at the position shown in Figure 2-1 and tilt it in the direction shown by the arrow. (③)
- 4. To remove the holder, insert a flat-head screwdriver into tab of the holder and tilt it in the direction shown by the arrow. (4)

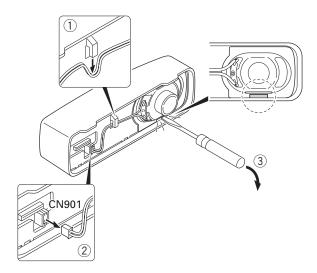

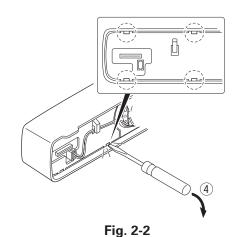

Fig. 2-1

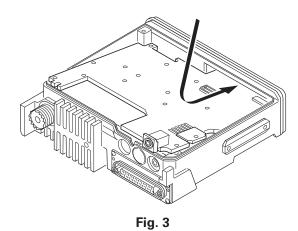

DISASSEMBLY FOR REPAIR

2. Precautions on Reassembly

■ TX-RX PCB (TX-RX unit B/3) Reassembly

- With the TX-RX PCB turned over, insert the flat cable from the D-sub PCB (TX-RX unit A/3) into the connector (CN427) on the TX-RX PCB.
- 2. Place the TX-RX PCB at its original position, tilt the TX-RX PCB and install the chassis as shown in Figure 3.

■ Securing the Audio IC (IC417) with screws

The screws for the audio IC are 8mm screws. These are longer than the other screws, so take care not to confuse them.

■ FINAL shield case (F10-2489-03) installation procedure

- 1. Place the shield case on the final section of the TX-RX unit (B/3).
- The shield case is installed on the positioning boss of the chassis by pushing down on "PUSH2" (on the shield case) while pushing "PUSH1" (stamped on two parts on the shield case) to the right.

■ Power supply cable installation procedure

- Pass the power supply cable through the chassis hole (1) as shown in Figure 4-1 and insert the bush into the chassis hole
- 2. Rotate the bush of the power supply cable 90 degrees clockwise as viewed from the rear of the chassis. (②)
- 3. Align the ignition sense connector (yellow) of the power supply cable around the chemical capacitor (C801) and connect it to the TX-RX unit (B/3) connector (CN804).
- Align the + (positive) terminal of the power supply cable (red) as shown in Figure 4-2 and fix it to the terminal strip with a screw.
- Align the (negative) terminal of the power supply cable (black) as shown in Figure 4-2 and fix it to the terminal strip with a screw.

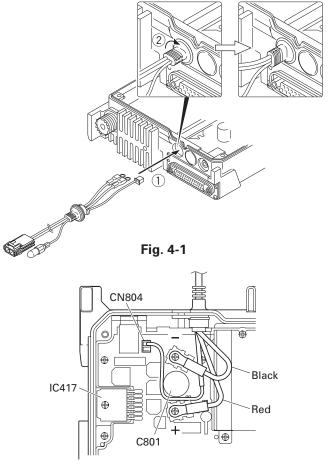

Fig. 4-2

■ Top packing installation procedure

- 1. Place the top packing over the shielding plate.
- 2. Fit the convex tab of the top packing into the hollow of the chassis. (1)
- Fit the chassis into the groove of the top packing. (2)
 Verify that the top packing is in close contact with the chassis.

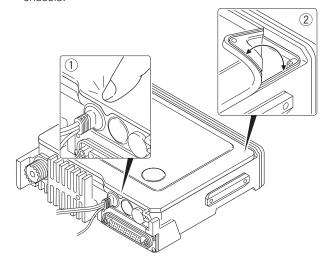

Fig. 5

DISASSEMBLY FOR REPAIR

■ D-sub cap installation procedure

To improve water resistance, fit the D-sub cap into the D-sub terminal hardware fixture of the transceiver in the following order:

- 1. Fit the left side (①) of the D-sub cap into the hardware fixture.
- 2. Fit the right side (②) of the D-sub cap into the hardware fixture.
- 3. Fit the center (③) of the D-sub cap into the hardware fixture

Verify that the D-sub cap is in close contact with the hardware fixture.

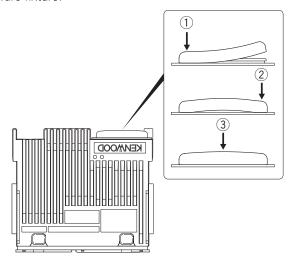

Fig. 6

■ Installing the holder (J19-5468-03) and speaker hardware fixture (J21-8481-03)

- 1. Insert two tabs of the holder (J19-5468-03) into the hollows in the top of the panel. (①)
- 2. Push the two tabs of the holder in on the opposite side of those in step 1 above and fit them into the hollow in the bottom of the panel. (②)

Note: Push in the holder until it snaps in place.

3. Install the speaker holder onto the panel. (3)

Note : To improve water resistance, fit the panel into the groove of the holder.

4. Place the speaker into the speaker holder.

Note: The speaker must not ride on the holder rib.

- 5. Place the spacer on the speaker.
- 6. Insert the hardware fixture (J21-8481-03) into the hollow of the panel as shown in Figure 7-3, then push two parts of the hardware fixture and fit it into the hollow of the top of the panel. (Fig. 7-3 4)

Note: Push in the hardware fixture until it snaps in place.

- Insert the speaker connector into the display unit connector (CN901).
- 8. Place the speaker lead on the holder hook.

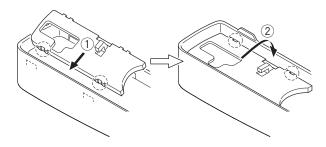

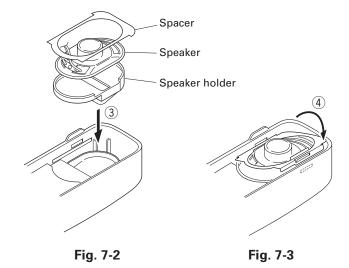

Fig. 7-1

1. Outline

The TK-8180 is a UHF/FM transceiver designed to operate in the frequency range of 450 to 520MHz. Transmission output power is 30 watts (490~520MHz : 25W). The maximum channel capacity is 512.

The unit consists of receiver, transmitter, phase-locked loop (PLL) frequency synthesizer, and control circuits.

2. Receiver Circuit

The receiver is double conversion superheterodyne, designed to operate in the frequency range of 450MHz to 520MHz.

The receiver circuit consists of the following: 2-1 frontend circuit, 2-2 first mixer, 2-3 IF amplifier circuit, 2-4 audio amplifier circuit, and 2-5 squelch circuit.

2-1. Front-end Circuit

The front-end circuit consists of former HPF (D107, D108, D109 and D110), RF amplifier Q103, and latter BPF (D103, D104, D105 and D106). The BPF covers frequency ranges 450 to 520MHz.

The latter BPF (D103, D104, D105 and D106) attenuates the unwanted signals, and sends only the necessary signal to the first mixer.

2-2. First Mixer

The signal from the BPF is heterodyned with the first local oscillator signal from the PLL frequency synthesizer circuit at the first mixer DBM (IC171) to become a 44.85MHz first intermediate frequency (IF) signal. The first IF signal is fed through a monolithic crystal filter (XF171) to further remove spurious signals.

2-3. IF Amplifier

The first IF signal is amplified by Q171 and Q172, and then enters IC172 (FM system IC). The signal is heterodyned again with a second local oscillator signal (44.395MHz) with in IC172 to become a 455kHz second IF signal. The second IF signal is fed through a 455kHz ceramic filters (CF172; Wide, CF171; Narrow) to further eliminate unwanted signal, and the quadrature detection circuit FM-detects the signal to produce a base-band signal and output it from pin 9.

2-4. Audio Amplifier

The demodulated audio signal from IC172 goes to IC415 through the AF amplifier (IC412) and IC413. The audio signal goes to an electronic volume (IC410) and is amplified to drive a loudspeaker by an audio power amplifier (IC417). The audio output can be provided to external 4Ω speaker through the speaker jack output (J401) on the rear panel. Q419 is a mute switch.

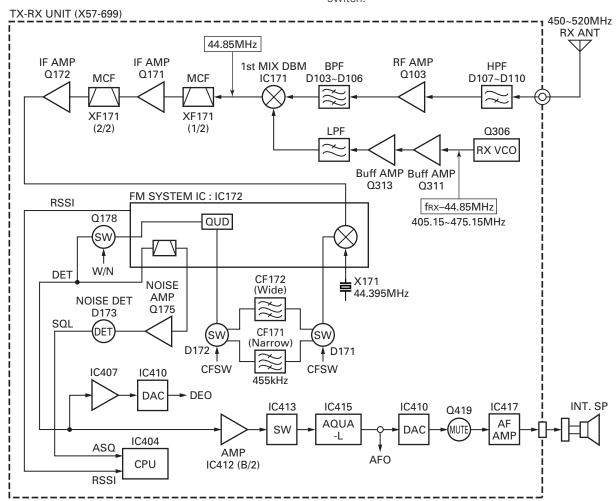

Fig. 1 Receiver circuit

2-5. Squelch Circuit

The output signal from IC172 enters FM IC again, then passed through a band-pass filter.

The noise component output from IC172 is amplified by Q175 and rectified by D173 to produce a DC Voltage corresponding to the noise level. The DC voltage is sent to the analog port of the CPU (IC404).

IC172 outputs a DC voltage (RSSI) corresponding to the input of the IF amplifier.

3. Transmitter Circuit

The transmitter circuit consists of the following circuits: 3-1 microphone circuit, 3-2 modulation level adjustment circuit, 3-3 driver and final power amplifier circuit, and 3-4 automatic power control circuit.

3-1. Microphone Circuit

The audio signal from the microphone goes into TX-RX unit (X57-699) from the display unit (X54-348) and passes through the mute switch (Q416). The audio signal is amplified by the microphone amplifier (IC414) and is input into the TXIN terminal of the audio processor (IC415) after passing through the multiplexer (IC413).

The input audio signal is output from the MOD terminal of the audio processor (IC415) and is amplified by the audio frequency amplifier (IC412) after passing through the electric volume (IC410).

3-2. Modulation Level Adjustment Circuit

The audio signal amplified by the audio frequency amplifier (IC412) is added to the low speed data LSD passed through the low pass filter (IC409). The combined signals is supplied to the VCO (voltage controlled oscillator) and the VCXO (voltage controlled crystal oscillator) X301, respectively.

3-3. Driver and Final Power Amplifier Circuit

The transmit signal obtained from the TX VCO buffer amplifier Q311, is amplified to approximately +17dBm by the driver amplifiers Q313, Q1 and Q2. This amplified signal is passed to the power amplifier module (power module) IC1, which consists of a MOS-FET amplifier and is capable of transmission output power.

3-4. Automatic Power Control Circuit

The automatic transmission power control (APC) circuit stabilizes the transmitter output power at a predetermined level by detecting the power module output with a diodes D6, D7 and D8. Diodes D6, D7 and D8 apply a voltage to DC amplifier IC72 (A/2). IC72 (B/2) compares the APC control voltage (PC) generated by microprocessor IC404 and DC amplifier IC71 (A/2, B/2) with the detection output voltage from IC72 (A/2) to control the Vgg pin of IC1, and stabilizes transmission output.

The APC circuit is configured to protect over-current of the power module due to fluctuations of the load at the antenna end and to stabilize transmission output at voltage and temperature variations.

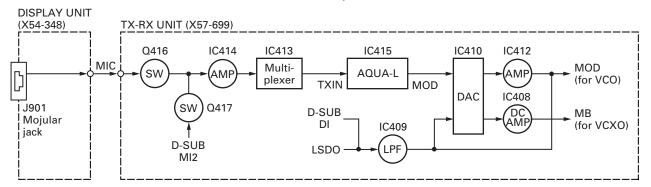

Fig. 2 Microphone and modultion level adjustment circuit

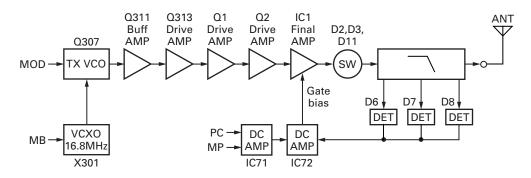

Fig. 3 Drive and Final power amplifier and automatic power control circuit

4. Frequency Synthesizer Unit

4-1. Frequency Synthesizer

The frequency synthesizer consists of the TCXO (X301), VCO, PLL IC (IC301) and buffer amplifiers.

The TCXO generates 16.8MHz. The frequency stability is 2.5ppm within the temperature range of –30 to +60°C. The frequency tuning and modulation of the TCXO are done to apply a voltage to pin 1 of the TCXO. The output of the TCXO is applied to pin 8 of the PLL IC.

The VCO consists of 2VCO and covers a dual range of the 405.15~475.15MHz and the 450~520MHz. The VCO generates 405.15~475.15MHz for providing to the first local signal in receive. The operating frequency is generated by Q307 in transmit mode and Q306 in receive mode. The oscillator frequency is controlled by applying the VCO control voltage, obtained from the phase comparator (IC301) to the variable capacitor diodes (D308 and D311 in transmit mode and D309 and D313 in receive mode).

The T/R pin of IC404 goes "high" in receive mode causing Q307 and Q309 to turn off, and Q306, Q308 and Q310 turn on. The T/R pin goes "low" in transmit mode.

The outputs from Q306 and Q307 are amplified by buffer amplifier (Q311) and doubled by Q301 and then sent to PLL IC.

The PLL IC consists of a prescaler, reference divider, phase comparator, charge pump (The frequency step of the PLL circuit is 20 or 25kHz). The input signal from the pins 8 and 5 of the PLL IC is divided down to the 20 or 25kHz and compared at phase comparator. The phase comparator output signal is fed into a low-pass filter (Q302 and Q303) before being applied to the VCO as a frequency control voltage. This low-pass filter's power is supplied by the DC/DC converter (IC251 and Q251). The DC signal is applied to the CV of the VCO and locked to keep the VCO frequency constant.

PLL data is output from DT (pin 112), PCK (pin 82) and PLE (pin 81) of the microprocessor (IC404). The data are input to the PLL IC when the channel is changed or when transmission is changed to reception and vice versa. A PLL lock condition is always monitored by the pin 80 (UL) of the microprocessor. When the PLL is unlocked, the UL goes low.

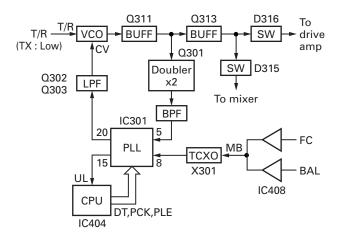

Fig. 4 PLL block diagram

5. Control Circuit

The block diagram of the control circuit is shown in Figure 5

The CPU (IC404) is a 16-bit microcomputer that contains a 256k-byte Mask ROM and a 20k-byte RAM. This CPU is connected with an external 512k-byte Flash ROM (IC405) and operates in memory expansion mode.

The Firmware Program is stored in the Flash ROM and the user data and adjustment data are stored in the EEPROM (IC401). The CPU and Flash ROM are connected with an 8 bit bus and the EEPROM and RTC IC (IC402) are connected with a I2C bus (*1). The RTC IC (IC402) has a clock function and is controlled by the CPU (IC404).

Serial communication with a PC is performed through two paths: through the 232C Level converter IC (IC416) and through the Display Unit Panel CPU (IC902). The 8 bit Shift Register (IC403) is used as an 8-port Extended Output Port. IC410 is an 8 bit-8ch D/A converter. The channels are set as follows:

Ch1: Modulation balance Ch2: Deviation Factor Ch3: Max Power Level Ch4: Reception tuning circuit Ch5: Deviation Factor

Ch6: Speaker volume
Ch7: VCXO control voltage
Ch8: DEO output level

*1: I2C bus is a registered trademark of PHILIPS of the Netherlands.

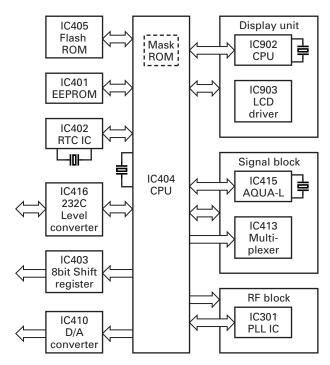

Fig. 5 Control circuit block diagram

6. Power Supply Circuit

The block diagram of the power supply circuit is shown in Figure 6.

Power is always supplied from +B to the circuit (5M, +B) that is always started and the circuits (SB, 8C, 5E, 8T, 8R, 5C, 5R) controlled by the CPU (IC404). When +B is supplied to the transceiver, Q801, D805 and IC805, regulate the voltage (5M) which is supplied to the circuit around the CPU. The CPU starts.

When the CPU detects that the +B voltage is higher than the voltage prescribed by IC802, the transceiver power (SB) is turned ON by controlling the SBC signal (Low: transceiver power OFF, High: transceiver power ON).

The CPU controls the TXC signal (Low: Transmission system power OFF, High: Transmission system power ON) during transmission to supply power (8T) to the transmission circuit. The CPU controls the RXC signal (Low: Reception system power OFF, High: Reception system power ON) during reception to supply power (8R, 5R) to the reception circuit.

When the CPU detects the PSW (Power Switch) signal, IGN (Ignition Sense) signal or INT signal, it controls the SBC signal and turns the transceiver power (SB) OFF.

If +B is not provided to the transceiver, power is supplied to only the RTC IC (IC402) through the secondary battery connected with CN401 to back up the clock.

7. Display Circuit

The display unit consists of the Panel CPU (IC902), the LCD driver (IC903), the TX/BUSY LED, the KEY detection, the Backlight and the Microphone jack circuits.

The Panel CPU is a 16-bit microcomputer that contains a 64k-byte Mask ROM and a 2k-byte RAM.

The Panel CPU performs serial communication with the Main CPU (IC404) on the TX-RX unit (B/3) and the Panel CPU detects keys and sends data communication contents through the MIC Jack to the Main CPU. The Panel CPU receives commands from the Main CPU and controls the display system.

The LCD operates with 1/9 duty under the LCD driver (IC903) control. The LCD and KEY Backlights are controlled by Q909. The display brightness of the LCD Backlight can be changed.

16	VDD	-	

COMPONENTS DESCRIPTION

Display unit (X54-3480-10)

Ref. No.	Part Name	Description
IC901	IC	Voltage regulator/ 5V
IC902	IC	Microprocessor
IC903	IC	LCD driver
Q901,902	Transistor	HOOK switch
Ω904	Transistor	TX indication LED switch
Q905	Transistor	BUSY indication LED switch
Q906	Transistor	Dimmer switch control
Q907	Transistor	Dimmer switch
Q909	Transistor	Backlight control switch
Ω910	Transistor	8C switch
Ω911	Transistor	8C switch control
Ω913	Transistor	Backlight control
D901,902	Zener diode	Voltage protection
D903	Varistor	Current limitter
D904~906	Diode	Surge protection
D907	LED	TX/Busy indication
D909~920	LED	LCD backlight
D921~930	LED	KEY backlight

TX-RX unit (X57-6990-10)

Ref. No.	Part Name	Description
IC1	IC	Power module
IC71,72	IC	DC amp for TX APC
IC171	IC	RX 1st mixer
IC172	IC	FM IF system IC
IC251	IC	DC-DC converter
IC301	IC	PLL system IC
IC302	IC	PLL CP switch
IC401	IC	EEPROM
IC402	IC	RTC processor
IC403	IC	Shift register
IC404	IC	Microprocessor
IC405	IC	Flash memory
IC406	IC	HSD BPF/HSD compalator
IC407	IC	DET amp/Data LPF (DB-25)
IC408	IC	LSD buffer amp/VCXO bias amp
IC409	IC	LSD LPF/Voltage DC-reference
IC410	IC	D/A converter

Ref. No.	Part Name	Description
	IC	•
IC411	IC	RF BPF tuning voltage DC amp Modulation LPF/DET amp
		<u> </u>
IC413	IC	AF switch IC
IC414	IC	MIC amp
IC415	IC	AQUA-L
IC416	IC	Level converter IC (RS-232C)
IC417	IC	Audio IC
IC801	IC	Voltage detector (CPU Reset)
IC802	IC	Voltage detector (INT)
IC803	IC	Voltage regulator/ 8V
IC804,805	IC	Voltage regulator/ 5V
IC807	IC	Voltage regulator/ 5V
Q1	Transistor	TX pre-driver
Q2	Transistor	TX driver
Q3	Transistor	TX gate switch
Q70	Transistor	High/Low power switch
Q72	FET	High/Low power switch
Q103	Transistor	Front-end LNA
Q171,172	Transistor	IF amp
Q173,174	Transistor	W/N CF switch control
Q175	Transistor	Noise Amp
Q176	FET	DET mute switch
Q177	Transistor	W/N CF switch control
Q178	Transistor	W/N discrete switch
Q179	Transistor	W/N CF switch control
Q251	Transistor	Ripple filter
Q301	Transistor	PLL f-in doubler amp
Q302,303	Transistor	PLL LPF
Q306,307	FET	TX/RX VCO
Q308~310	Transistor	TX/RX VCO switch
Q311	Transistor	VCO buffer amp
Q312	Transistor	Ripple filter
Q313	Transistor	VCO buffer amp
Q402	Transistor	Beat shift switch
Q403	FET	AF switch (Voice)
Q405	Transistor	AQUA control switch
Q406	FET	AF switch (LSD)
Q409	Transistor	AF mute switch
Q410,411	Transistor	MIC AGC
Q412	FET	AF mute switch

COMPONENTS DESCRIPTION

Ref. No.	Part Name	Description
Q413,414	FET	AF Switch
Q415	FET	AF Switch (Voice)
Q416,417	FET	MIC mute switch
Q418	Transistor	AF mute control switch
Q419	Transistor	AF mute switch
Q600	Transistor	MIC mute switch
Q701,702	Transistor	Inverter switch
Q801	Transistor	Voltage regulator/ 8.5V
Q802	Transistor	SB control switch
Q803	Transistor	8T switch
Q804	Transistor	8R switch
Q805	Transistor	5R switch
Q806	Transistor	8T control switch
Q807	Transistor	SB control switch
Q808	Transistor	8R control switch
Q809	Transistor	5R control switch
Q810	FET	SB switch
Q811	Transistor	Ignition sense control switch
Q812	Transistor	CPU reset switch
D1	Zener diode	Voltage protection
D2,3	Diode	ANT switch
D6~8	Diode	RF detector
D103~110	Variable	RF BPF tuning
	capacitance diode	
D111	Diode	ANT switch
D171,172	Diode	W/N CF switch
D173	Diode	SQ noise-amp detector
D174	Diode	DET mute switch control

Ref. No.	Part Name	Description
D251	Diode	Reverse voltage protection
D308,309	Variable	Frequency control for TX/RX VCO
	capacitance diode	
D311	Variable	Frequency control for TX/RX VCO
	capacitance diode	
D313	Variable	Frequency control for TX/RX VCO
	capacitance diode	
D314	Variable	Modulation control for TX VCO
	capacitance diode	
D315,316	Diode	TX/RX band switch
D402~404	Diode	RTC battery control
D405,406	Zener diode	Voltage protection
D407	Diode	DC detector
D408,409	Diode	MIC-amp AGC detector
D412~414	Diode	Surge protect
D416	Diode	AF mute control
D417,418	Diode	Isolator
D421~423	Diode	Voltage protection
D600,601	Diode	MIC mute control
D701	Zener diode	Voltage protection
D702,703	Diode	Voltage protection
D704~708	Diode	Surge protect
D709,710	Zener diode	Voltage protection
D711~713	Diode	Surge protect
D714	Zener diode	Voltage protection
D801	Surge absorber	Voltage protection
D802	Diode	DC reverse connection protect
D804,805	Zener diode	Voltage protection

PARTS LIST

* New Parts. A indicates safety critical components.

Parts without **Parts No.** are not supplied.

Les articles non mentionnes dans le **Parts No.** ne sont pas fournis.

Teile ohne Parts No. werden nicht geliefert.

Panel Test Mode

■ Test mode operation features

This transceiver has a test mode. To enter test mode, press [A] key and turn power on. Hold [A] key until frequency version appears on LCD. Test mode can be inhibited by programming. To exit test mode, switch the power on again. The following functions are available in test mode.

■ Key operation

Key	"FNC" not appears	
	Function	Display
[S]	Shifts to Panel tuning mode	-
[A]	Function on	"FNC" appears
[B]	MSK 1200bps and 2400bps	2400bps : ☑ icon appears
[C]	Test signaling CH up	Signaling No.
[\$]/[¥]	Test frequency CH up/down	Channel No.
[^]/[~]	Volume up/down	-
[ك]	Squelch on/off	В
[■]	Narrow/Wide 4k/Wide 5k	Narrow : "n",
		Wide 4k : "s",
		Wide 5k : "w"
Micropho	one key	
[PTT]	Transmit	-
[0] to [9]	Use as the DTMF keypad.	-
and [A],	If a key is pressed during	
[B], [C],	transmission, the DTMF	
[D], [#],	corresponding to the key	
[*]	that was presses is sent.	

Key	"FNC" appears		
	Function	Display	
[S]	High power / Low power	Low : 💢 icon appears	
[A]	Function off	-	
[B]	Compander on/off	On : 🕽 icon appears	
[C]	Beat shift on/off	On : ◊ icon appears	
[\$]/[≽]	Function off	-	
[^]/[~]	Function off	-	
[ك]	Squelch level 0	On : P • icon appears	
[]	LCD all lights	LCD all point appears	
Micropho	Microphone key		
[PTT]	Transmit	-	
[0] to [9] and	Function off	-	
[A], [B], [C],			
[D], [#], [*]			

Notes:

- If a [S], [A], [B], [C] key is pressed during transmission, the DTMF corresponding to the key that was pressed is sent.
- The "Wide 4k" can not use, please skip it.

LED indicator

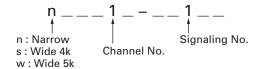

Red LED Lights during transmission.

Green LED Lights when there is carrier.

Sub LCD indicator

"FNC" Appears at function on.

· LCD display in panel test mode

■ Frequency and Signaling

The set has been adjusted for the frequencies shown in the following table. When required, readjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

Test frequency

СН	RX (MHz)	TX (MHz)

Panel Tuning Mode

■ Preparations for tuning the transceiver

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is turned, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a 4Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

■ Transceiver tuning

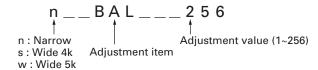

(To place transceiver in tuning mode)

Press [S] key, now in tuning mode. Use [B] key to write tuning data through tuning modes, and $[\approx]/[\approx]$ to adjust tuning requirements (1 to 256 appears on LCD).

Use [C] key to select the adjustment item through tuning modes. Use [A] key to adjust 3 or 5 reference level adjustments, and use [■] key to switch between Wide 5k/Wide 4k/Narrow

Channel appears on LCD. Set channel according to tuning requirements.

Test Equipment Required for Alignment

Test Equipment		Major Specifications
1. Standard Signal Generator	Frequency Range	400 to 520MHz
(SSG)	Modulation	Frequency modulation and external modulation
	Output	0.1μV to greater than 1mV
2. Power Meter	Input Impedance	50Ω
	Operation Frequency	400 to 520MHz or more
	Measurement Capability	Vicinity of 50W
3. Deviation Meter	Frequency Range	400 to 520MHz
4. Digital Volt Meter	Measuring Range	1 to 20V DC
(DVM)	Accuracy	High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity	Frequency Range	10Hz to 600MHz
Frequency Counter	Frequency Stability	0.2ppm or less
7. Ammeter		13A or more
8. AF Volt Meter	Frequency Range	50Hz to 10kHz
(AF VTVM)	Voltage Range	3mV to 3V
9. Audio Generator (AG)	Frequency Range	50Hz to 5kHz
	Output	0 to 1V
10. Distortion Meter	Capability	3% or less at 1kHz
	Input Level	50mV to 10Vrms
11. Voltmeter	Measuring Range	10 to 1.5V DC or less
	Input Impedance	$50k\Omega$ /V or greater
12. 4 Ω Dummy Load		Approx. 4Ω, 20W
13. Regulated Power Supply		13.6V, approx. 20A (adjustable from 9 to 20V)
		Useful if ammeter requipped

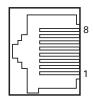

Test cable for microphone input (E30-3360-08)

Tuning cable (E30-3383-05)

Adapter cable (E30-3383-05) is required for injecting an audio if PC tuning is used. See "PC Mode" section fot the connection. Lead wire⊕ Shield wire⊝

		L≤0.7V, H≥4.2V/25kΩ load, Zo≤1kΩ
10	RXD2	Serial data input 2. TTL level.
		Input voltage range : +5/0V max.
		L≤0.8V, H≥4.2V
11	GND	Ground.
12	AUXI/O7	AUX input/output 7. Same as AUXI/O9
13	AUXI/O6	AUX input/output 6. Same as AUXI/O9
14	SB	Power output after power switch.
		DC13.6V±15%, 2.0A max.
15	AUXO2	AUX output 2. Open collector (500mA max.)
		(Default none) L≤0.3V
16	AUXO1	AUX Output 1. Same as AUXO2
17	AFO	RX filtered audio output (DC-coupled).
		AF low level output.
		Wide: 700mVp-p typ.
		Narrow : 700mVp-p typ. (Standard modulation)
18	GND	Ground.
19	DEO	Detected signal output (DC-coupled).
		AF output level adjustable (740mVp-p typ.)
20	AUXI/O5	AUX input/output 5. Same as AUXI/O9
21	AUXI/O4	AUX input/output 4. Same as AUXI/O9
22	AUXI/O3	AUX input/output 3. Same as AUXI/O9
23	AUXI/O2	AUX input/output 2. Same as AUXI/O9
24	AUXI/O1	AUX input/output 1. Same as AUXI/O9
25	ME	MIC ground.

TX-RX unit (X57-6990-10) (B/3)

		(A57-0990-10) (B/3)
Pin No.	Name	Description
	Г	CN301 (to TX-RX unit C/3)
1	REF	Reference signal otput to the PLL IC.
2	Fin	Complementary signal output to the PLL IC.
3	CPGND	Ground.
4	5C	5V output.
5	GND	Ground
6	СР	Signal input from charge pump block in the PLL IC.
		CN302 (to TX-RX unit C/3)
1	UL	Control signal input form the PLL IC.
2	PLE	Control signal output to the PLL IC.
3	DT	Control signal output to the PLL IC.
4	PCK	Control signal output to the PLL IC.
5	GND	Ground.
6	DGND	Ground.
		CN403 (to VGS-1)
1	OPT1	VGS busy signal input. Option boad I/F 1.
		Output : L≤0.45V, H≥4.7V/25kΩ load
		Input : L≤1.0V, H≥4.0V, Input voltage : 0V~5.0V
2	OPT3	VGS playback signal input. Option boad I/F 3.
		Output : L≤0.45V, H≥4.7V/25kΩ load
		Input : L≤1.0V, H≥4.0V, Input voltage : 0V~5.0V
3	RXD1	Serial data input.
		Input : L≤1.0V, H≥4.0V, Input voltage : 0V~5.0V
4	TXD1	Serial data output / PTT singanl output (SC20-460).
		Output : L≤0.45V, H≥4.7V/25kΩ load
5	CLK	Serial clock output.
6	OPT4	VGS enable output. Option boad I/F 4.
		Output : L≤0.45V, H≥4.7V/25kΩ load
7	USEL	UART speed select output. L: 19200bps fixed
8	OPT5	VGS reset signal output. Option boad I/F 5.
		Output : L≤0.45V, H≥4.7V/25kΩ load
9	DGND	Ground.
10	AGND	Ground.
11	AO	VGS audio input. Zin≥10kΩ, 1Vp-p max,
		Input Voltage : 0V~5.0V
12	Al	VGS audio output. Zo≥10kΩ
13	AGND	Ground.
14	5E	5V power supply output. 78mA max
15	STON	Side tone input. 1kHz, 5Vp-p
		1

Pin No.	Name	Description
16	DTI	Data signal input.
47	TOTI	Zin≥22kΩ, 600±200mVp-p
17	TCTL	Speaker mute signal input.
- 10	110	Input : L≤1.0V, H≥4.0V, Input voltage : 0V~5.0V
18	NC	Non-connection.
19	AUDIH	MIC mute signal input.
20	OPT2	Option boad I/F 2.
		Output : L≤0.45V, H≥4.7V/25kΩ load
		Input : L≤1.0V, H≥4.0V, Input voltage : 0V~5.0V
21	TXO	MIC signal output (AC coupled) before pre-
		emphasis. Zo>2.2kΩ, 130±50mVp-p typ.
22	RXEO	Audio signal output (DC coupled) after de-
		emphasis. Zo>30k Ω , 1±0.3Vp-p typ.
23	RXEI	Audio signal input (DC coupled) after de-
		emphasis. Zin>15k Ω , 1 \pm 0.3Vp-p typ.
24	TXI	MIC signal input (AC coupled) before pre-
		emphasis. Zin>22kΩ, 500±50mVp-p typ.
25	OPT6	Option boad I/F 6.
		Output : L≤0.45V, H≥4.7V/25kΩ load
26	8C	Power input after power switch.
		8.0V typ, 100mA max
	CN4	127 (to TX-RX unit A/3 CN701)
1	NC	Non-connenction.
2	SB	Power output after power switch.
3	SB	Power output after power switch.
4	SB	Power output after power switch.
5	SB	Power output after power switch.
6	SB	Power output after power switch.
7	SB	Power output after power switch.
8	AFO	RX filtered audio output.
9	DI	Data signal input.
10	5C	5V.
11	GND	Ground.
12	DEO	Detected signal output.
13	MI2	External MIC input.
14	ME	MIC ground.
15	GND	Ground.
16	RXD1	Serial data input 1.
17	AUXO2	AUX output 2.
18	TXD1	Serial data output 1.
	1	1

Pin No.	Name	Description	
19	AUXO1	AUX output 1.	
20	AUXIO9	AUX input/output 9.	
21	AUXIO5	AUX input/output 5.	
22	AUXIO8	AUX input/output 8.	
23	AUXIO4	AUX input/output 4.	
24	TXD2	Serial data output 2.	
25	AUXIO3	AUX input/output 3.

29	AUXIO7	AUX input/output 7.	
30	AUXIO6	AUX input/output 6.	
	7.0700	CN428	
1			
2	SPI	Speaker output.	
3	SPO	Speaker input.	
4	PA	Control signal output of PA function.	
5	HOR	Control signal output of Horn alert function.	
6	GND	Ground.	
	Cľ	N429 (to Display unit CN902)	
1	(DM)	Reserve.	
2	GND	Ground.	
3	RXD	Serial data signal input.	
4	TXD	Serial data signal output.	
5	NC	Non-connenction.	
6	5C	5V output.	
7	SHIFT/MODEL	Control signal output of beat-shift function.	
8	(CLK)	Reserve.	
9	(LCDDO)	Reserve.	
10	(LCDDI)	Reserve.	
11	(LCDRST)	Reserve.	
12	RST2	Reset signal output.	
13	PSENS	Detection signal input of display unit.	
14	GND	Ground.	
15	ME	MIC ground.	
16	MIC	MIC signal input.	
17	GND	Ground.	
18	GND	Ground.	
19	PSW	Detection signal input of power switch.	
20	NC	Non-connenction.	

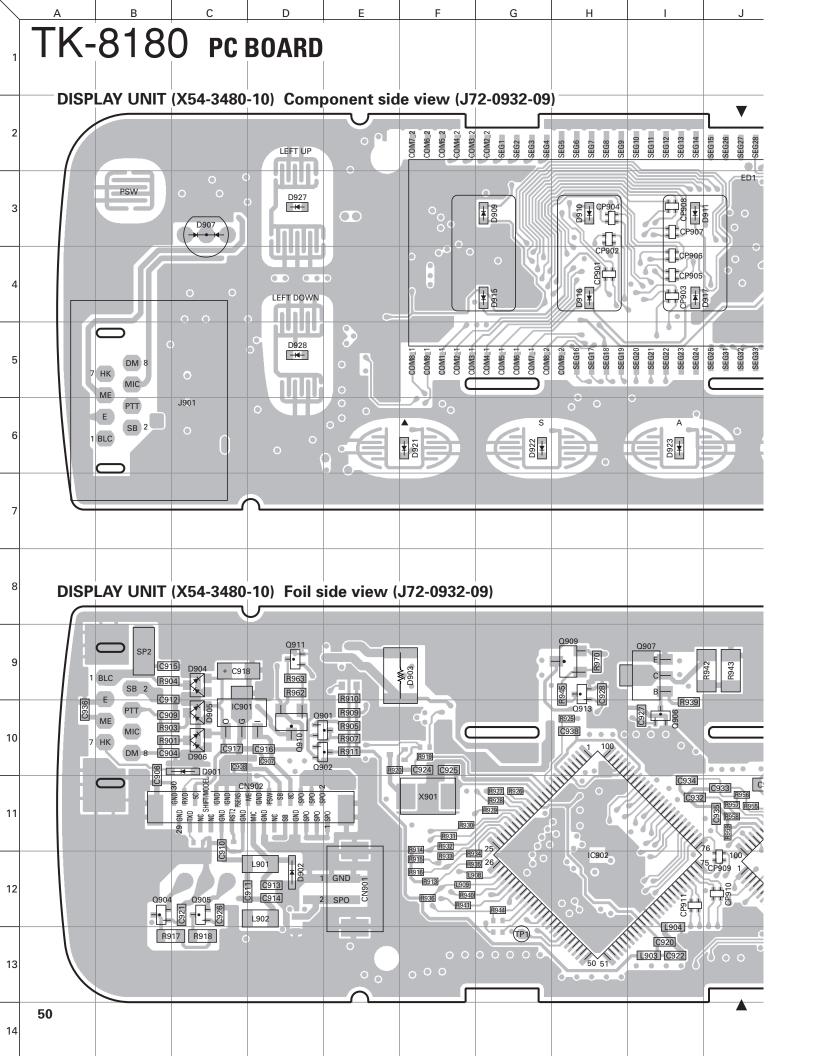

Pin No.	Name	Description
21	SB	Power output of switched power supply.
22	SB	Power output of switched power supply.
23	8C	8V output.
24	GND	Ground.
25	SPO	Speaker output.
26	SPO	Speaker output.
27	SPO	Speaker output.
28	SPO	Speaker output.
29	SPO	Speaker output.
30	SPO	Speaker output.
CN804		
1	IGN	Ignition sense input.
2	GND	Ground.

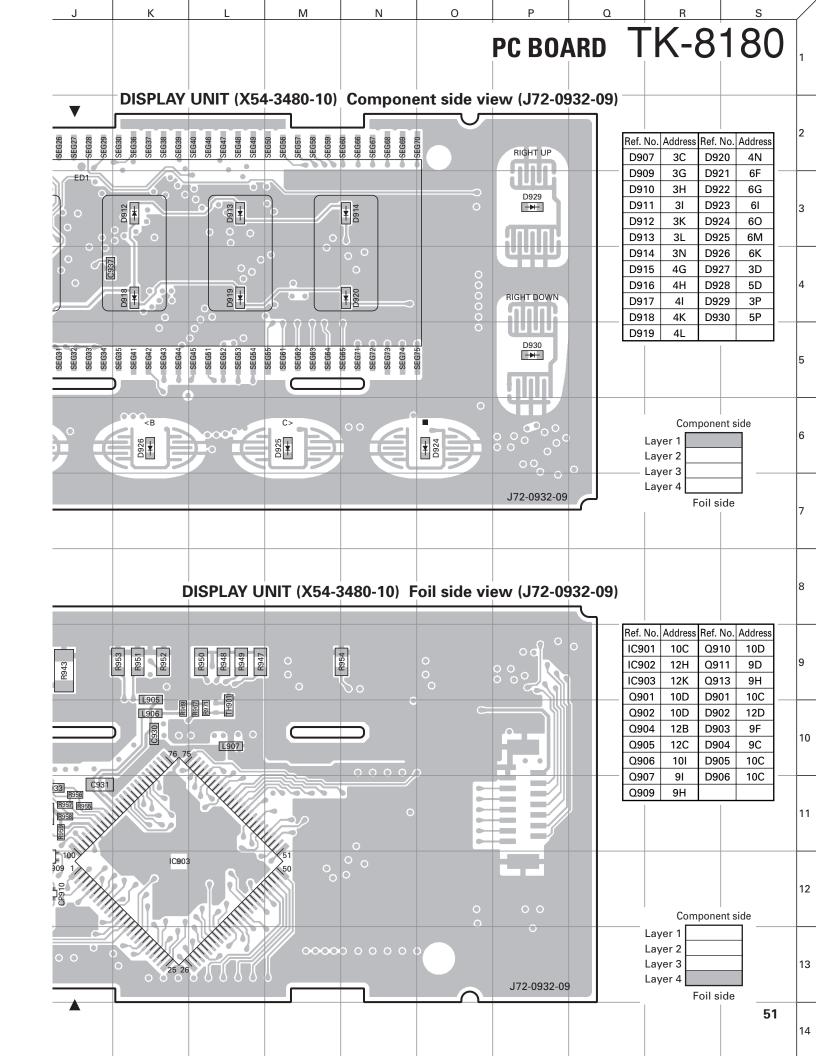

Solder Land

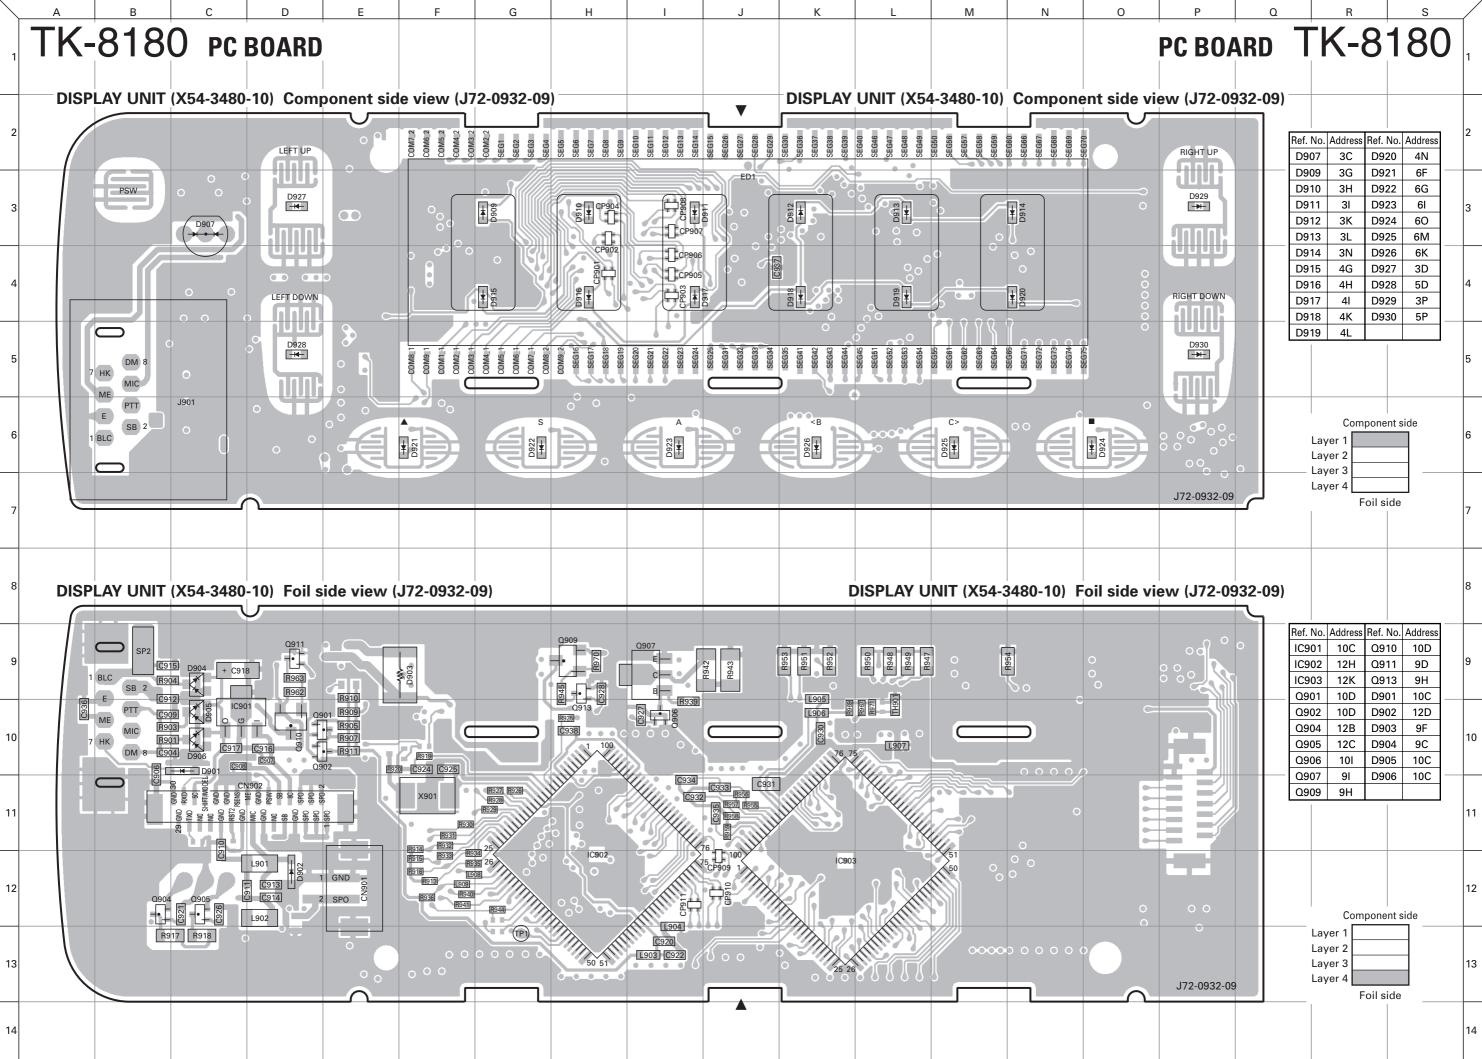

Name	Description	
to ANI board		
GND (A-)	Ground.	
OPT1	TX sens signal output. Conv. L : TX, H : Not TX	
(CH BUSY)	LTR L : Link complete, H : Not link complete	
	L≤0.45V, H≥4.7V/25kΩ load	
OPT3	TX control signal input. Active low.	
(KEY)	L≤1.0V, H≥: 4.0V, Input voltage 0V~5.0V	
OPT4	PTT signal output. L : TX, H : Not TX	
(PTT)	L≤0.45V, H≥4.7V/25kΩ load	
OPT5	Emergency signal output.	
(EMERGENCY)	L : Emergency function is operated,	
	H : Emergency function is not operated	
	L≤0.45V, H≥4.7V/25kΩ load	
5E (A+)	5V power supply (78mA max.).	
DTI	Data signal input. Zin>22k Ω , 600±200mVp-p	
(DATA OUT)	(Standard modulation)	
TCTL	Speaker mute signal input. H : Unmute	
(TONE CTRL)	L≤0.8V, H≥4.2V, Input voltage : 0V~5.0V	
AUDIH	MIC mute signal input. L : Mute	
(AUDIO INHIB)		
OPT2	Emergency signal input. Active low.	
(AUX I/O)	L≤1.0V, H≥: 4.0V, Input voltage 0V~5.0V	
STON	Side tone input. 1kHz, 5Vp-p	
(SIDE TONE)		

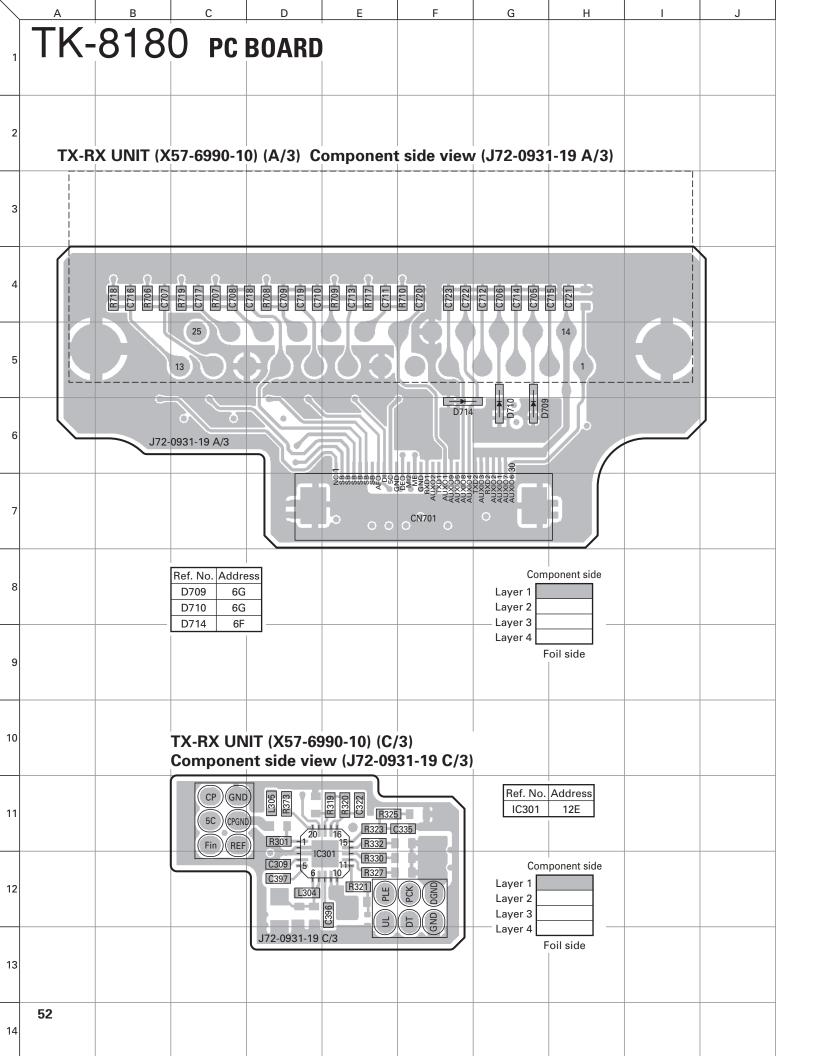

Name	Description
	to Scrambler board
GND (GND)	Ground.
TXD1	PTT signal output. L : TX, H : Not TX
(PTT)	L≤0.45V, H≥4.7V/25k Ω load
	(PTT signal input) Actiive low.
	L≤1.0V, H≥4.0V, Inut voltage : 0V~5.0V
OPT1 (DODE	Scramble code signal output 1.
SELECT1)	L≤0.45V, H≥4.7V/25k Ω load
OPT3 (CODE	Scramble code signal output 2.
SELECT2)	L≤0.45V, H≥4.7V/25kΩ load
OPT4	Echo PTT signal output. L : TX, H : Not TX
(ECHO PTT)	L≤0.45V, H≥4.7V/25k Ω load
OPT5 (CODE	Scramble code signal output 4.
SELECT8)	L≤0.45V, H≥4.7V/25k Ω load
TXO	MIC signal output (AC coupled) before
(TX OUT)	pre-enphasis. Zo>2.2kΩ, 130±50mVp-p typ.
	(Standard modulation)
OPT2	Scrambler control signal output.
(SCRAMBLE)	L : ON, H : OFF. L≤0.45V, H≥4.7V/25kΩ load
RXEO	Audio signal output (DC coupled) after
(RX OUT)	de-enphasis. Zo>30kΩ, 1±0.3Vp-p typ.
	(Standard modulation)
TXI	MIC signal input (AC coupled) before
(TX IN)	pre-enphasis. Zin>2.2k Ω , 130 \pm 50mVp-p typ.
	(Standard modulation)
RXEI	Audio signal input (DC coupled) after
(RX IN)	de-enphasis. Zin>15kΩ, 1±0.3Vp-p typ.
	(Standard modulation)
OPT6 (CODE	Scramble code signal output 3.
SELECT4)	L≤0.45V, H≥4.7V/25k Ω load
8C (+V)	8V AVR output. 8.0V typ, 100mA max.
	to GPS receiver
GND (GND)	Ground.
RXD1*1	Data output.
(DATA OUT1)	
RXD2*1	Data output.
(DATA OUT1)	
5E (+5V)	5V
*1 : Depending	on the connected optional accessory, the DATA

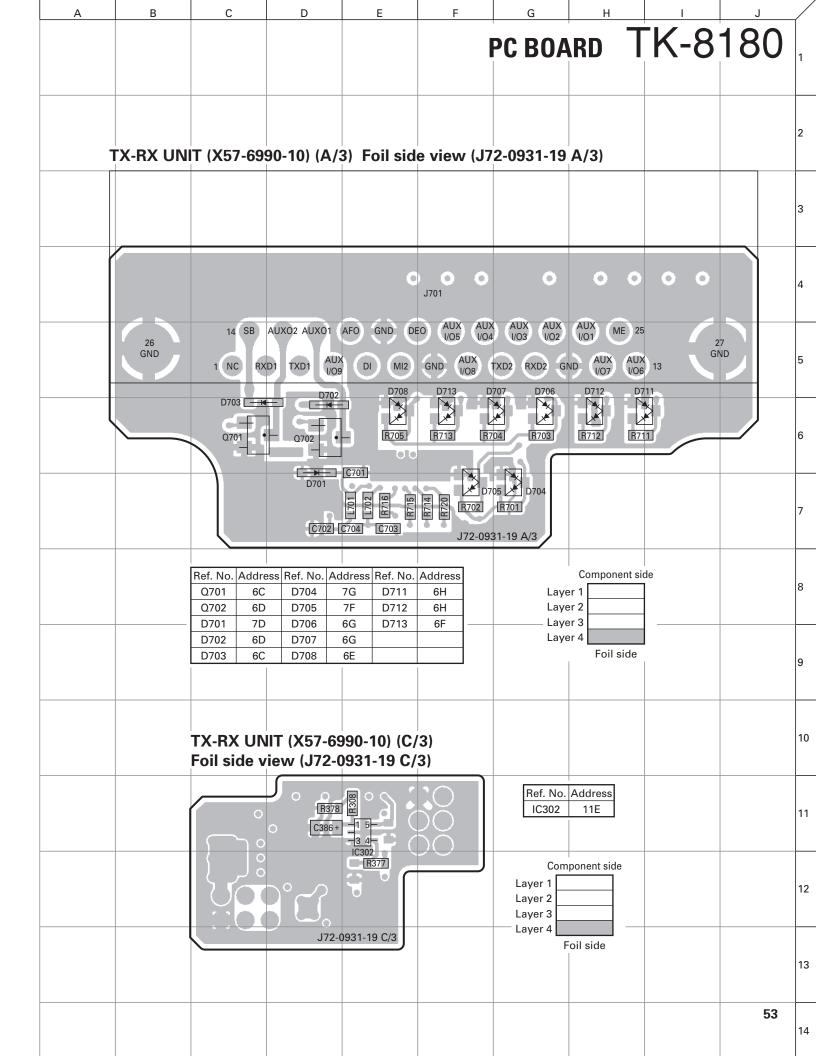

^{*1 :} Depending on the connected optional accessory, the DATA OUT1 may connect to either RXD1 or RXD2.
